

Auto Online Mechanism and Method

Abstracts

- 5 A mechanism and method to connect to Internet automatically providing at least one card in which there is pre-stored corresponding data to automatically log on predefined target website and open the web page in Internet Explorer. There is also a card reader can hold inserted card and can automatically output the data read from the inserted card. A microcomputer-processing device that has a permanent program, which can display web page
- 10 of Internet Explorer. When the card is inserted to card reader, it can automatically log on predefined target website and open the web page in Internet Explorer. The permanent program can automatically check at fixed intervals whether the card is still in the card reader. When the data of the card is still being output in a predefined time, the system will retain online mode. Otherwise, if the data of the card ceases to be output in a predefined time, the
- 15 system will change to offline mode immediately.
